Hi Greg,

Sorry it didn't work out. Someone complained to them awhile back about the paper being racist, and so we are under strict scrutiny with NIH.

Best of luck with your research,

Bryan

Bryan

Thanks for all your help but that looks like a dead end.

The process has been very informative to me and I will try to complete my little project using another data source. In the interim I plan to use the (less appropriate) PING data to get a broad-brush picture. I will keep you in the picture if I make any progress on this.

Best regards and thanks again,

Greg

Subject: Re: Request for dating sharing

Thank you,

What steps must be taken to either share data or to output results and share those?

Bryan

Dear Bryan,

I would like to inform you that at this time you can NOT share the data with anybody in any form.

Thank you

Abbas Parsian, Ph.D.

Chair of JAAMH

Subject: Request for dating sharing

Dear NIH,

This is Bryan Pesta at Cleveland State University. I'm writing regarding a DAR I have (Trajectories of Complex Phenotypes Study, phs000607; Data Access Request #73948-1 for Project 19747) for restricted access data. A professor at Maynooth University recently contacted me regarding a paper (Lasker et al. 2019) my lab published using these data. His name is Gregory Connor and he asked if we could share just two of our derived variables. The first variable is percent European / African ancestry, and the second is self-identified race (condensed into either Black, White or Mixed). Please note that participants cannot be identified from just these two variables.

Professor Connor wants to simulate his nonparametric estimator of the frequency distribution of genetic admixture conditional on racial self-identification. I have attached his paper here. He requested that we ask you for permission to share data for these two variables with him.

Please let me know if this is permissible, or what would need to be done to share the requested data.

Thank you for your consideration,

Bryan J. Pesta
